

SYSTEM AND METHOD FOR PROCESSING INVOICE OF EXPORTED PRODUCT

ABSTRACT

A system and a method for processing an invoice of exported products are proposed, allowing a manufacturer that is ready to export products to immediately transmit invoice and packing data of the exported products through a network communication system to a forwarder company and a custom broker, so as to construct exportation associated documents. This therefore saves time consumed in invoice data printing and posting, and makes the manufacturer more efficiently interact with the forwarder company and the custom broker. In addition, the foregoing system and method for processing an invoice of exported products eliminate the use of manual printing or delivering the invoice and packing data of the exported products, so that the manufacturer can effectively save human resources. Therefore, the invention is advanced and practicable.
